---

The template automatically changes the size of the logo based on what image is present. Therefore, there is no need to manually change the dimensions in the CSS.

The following tutorial outlines how to edit the logo with **Adobe® Fireworks CS4**. Fireworks is required for logo editing. CS3 can be used for image source editing.

### Logo Editing Video Tutorial

Learn how to customise your Somaxiom logo using Adobe® Fireworks with this detailed video tutorial.

### [Watch Now!](#)

You will want to install the provided fonts before proceeding to edit in Fireworks, if you wish to use the same font for your logo editing.

## Editing in Adobe®

## Fireworks CS4

### [Step 1](#)

Open the **logo-source.png** file in Adobe® Fireworks.

Focus on the right column, titled **Layers**. Select the **Web layers** directory and click the eye icon to the left of the logo slice (the green object). This will make the slice invisible so you can edit

the file.

### Step 2

Double click on the logo text. Now you can edit the text of logo to your choosing.

Next, double click on the slogan logo text. Now you can edit the text of logo to your choosing.

insert new slogan text messenger here  
newname

### Step 3

Reactivate the Slice in the Web Layers column, this will place a green rectangle over the logo image. Change the size of the slice (or move it) to match the new size if applicable.

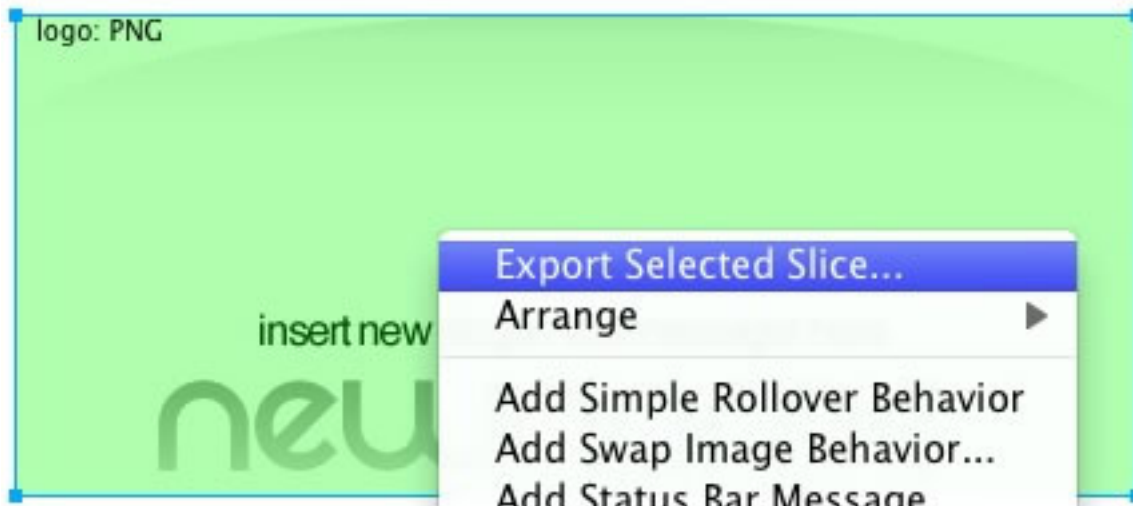

### Step 4

Now you will want to export the logo. Right click on the image slice and select **Exported Selected Slices...** from the contextual menu. Proceed to export it to your computer for uploading.

### Step 5

If you are new to Fireworks, you may be wondering why it appears that there is only one style variation in the source. This is not the case as we take advantage of the Frame features of Fireworks. You need to simply switch frames to see all the other style variation sources.

There are a few ways to change frames and we will show 2 methods that you can use.

In the right column where you find the Layers toolbar including the Web Layers area, you should see another tab/toolbar named Frames. Just left click on the title **Frames** to enter the frames area. Then you can click on either of the frames which are named to show which style variant is on that particular frame.

The second method is the easiest and simplest. At the bottom of the Fireworks canvas is a row of buttons and arrows. Select the arrows to switch between frames.

### Uploading the changed files

#### Step 1

Once you have successfully edited then exported your new logo, you will need to upload it to your server. This process is best done via a FTP client such as [Filezilla](#)

1. Open your FTP client on your local computer.
2. Login to your web server where **Somaxiom** is installed.
3. Navigate to the /templates/rt\_somaxiom\_j15/images/logo/\*style/ directory.
4. Upload **logo.png** (and any other logo related images) to this directory (You may need to browse on the local panel in the FTP client to find where you have exported your logo).
5. Clear your browser cache before viewing such as using the keyboard commands on Windows, **Ctrl+F5**.

Ensure that you are uploading the correct logo to avoid confusion if it does not change. Also take into account hosting permissions. Sometimes, hosts which are not designed for Joomla may have permissions not suited for the setup, thus, the upload will not be complete. In this case, contact your hosting provider.
